

Recording the temperature

Over the next week, you need to find a temperature for each day of the week. You could measure this yourself, or look on the internet or even in the paper.

Record the temperatures in a table and copy it into your book.

	Mon	Tues	Wed	Thurs	Frid	Sat	Sun
Temp.							

Then draw a simple line graph, showing the different temperature throughout the week.

If you want to add another line to your graph, try to find out some temperatures for another country in the world which is either hotter or colder than ours and plot these on in a different colour.

Enjoy! ☺
